Abstract

In the 1983 meeting of the American Society of Plastic Surgeons, Yves-Gerard Illouz introduced his technique of fat aspiration. The term “Liposuction” was first used by Pierre Fournier when referring to his technique of using a syringe to remove fat and reintroduce it into specific areas to increase contour. Liposuction has come a long way from the early 1980s. High-definition (HD) liposuction combines traditional lipoplasty techniques with a more accurate understanding of how this relates to the natural musculature throughout the body. Modern techniques combine a myriad of methods, including: ultrasound-, power-, laser-, and manual-assisted liposuction; abdominal etching; as well as, radio frequency devices which have been shown to tighten the skin and yield more desirable and “smoother” results.

- *The Renuvion® APR Handpiece is intended for the delivery of radiofrequency energy and/or helium plasma where coagulation/contraction of soft tissue is needed. Soft tissue includes subcutaneous tissue.*
- *The Renuvion APR Handpiece is intended for the coagulation of subcutaneous soft tissues following liposuction for aesthetic body contouring.*
- *The Renuvion APR Handpiece is indicated for use in subcutaneous dermatological and aesthetic procedures to improve the appearance of lax (loose) skin in the neck and submental region.*
- *The Renuvion APR Handpiece is intended for the delivery of radiofrequency energy and/or helium plasma for cutting, coagulation and ablation of soft tissue during open surgical procedures.*
- *The Renuvion APR Handpiece is intended to be used with compatible electrosurgical generators owned by Apyx Medical.*
